

AMENDMENTS TO THE ABSTRACT:

Please amend the Abstract as follows:

ABSTRACT OF THE DISCLOSURE

Method for the insertion and processing of information for the control, by a node, of the broadcasting of a data stream going through a basic network of a heterogeneous network;
and corresponding nodes

In a Δ method for the insertion of information for the control of the broadcasting of a data stream in a heterogeneous network, the ~~heterogeneous network includes~~ including at least one an entry sub-network conveying first packets and a basic network conveying second packets. The entry sub-network is connected to the basic network by ~~means of~~ an entry node forming the second packets ~~from at least one sub-part of at least one first packet~~. The entry node [[;]] receives first packets from the entry sub-network, [[;]] associates an access level with each first packet from a plurality of access levels, as a function of a predetermined policy of association, [[;]] forms each second packet by enclosing at least a first packet or part ~~of a first packet~~ thereof into said the second packet, the enclosed first packets or part ~~of the first packets enclosed within the second packet~~ thereof being associated with a same access level, [[;]] for each second packet, inserts, into a field of the second packet representing the broadcast control information, the same access level, associated with the at least first packet or part of a first packet enclosed within the second packet; and transmits the formed second packets formed into the basic network.
